3	COMPOSITION / INFORMATION ON INGREDIENTS				
	Chemical characterisation	Solid bases plus additives – see section 16 The CHIP/CLP classifications required in this section are related to that of the product supplied. To comply with the legislation the classification of the relevant ingredients of the product, as if they were present at 100%, must be outlined. Where ingredients are present in the product at very low concentrations the level of risk to the user is reduced, hence the reason that the classifications for the individual components and the product are different NOTE: The classification of calcium hydroxide is that of a powdered/granular form. In P3 Sodalime it is contained in a pellet and the probability of inhalation is negligible. Therefore, the classification of H335, STOT SE 3 which is applied to the powdered/granular form of calcium hydroxide does not appear for P3 Sodalime.			
	Chemical Name	CAS-No	EINECS/ELINCS	Classification	Concentration
	Sodium Hydroxide	1310-73-2	215-185-5	Skin Corr: I ; H314	<4%
	Calcium Hydroxide	1305-62-0	215-137-3	Skin Irrit. 2 H315 Eye Damage 1 H318 WEL assigned STOT SE 3 H335	>75%
